

PX5210HT, PMMA / Acrylic-like

Alternative Designations

Key Features

High resistance against impact • Clear/transparent • Heat resistant • Easy to process

Description

The material has a viscosity of 500 – 650 MPa and is developed with the combination of UPX5210 POLYOL, UPX5210 ISOCYANATE, and UPX5210-S POLYOL. All of the combined to produce PX5210HT. The material is resistant to heat up to 105°C and is used to produce vacuum cast parts.

Mechanical Properties

Thermal Properties
